1. About the CargoCard

Fast, easy and reliable access with the CargoCard

With the CargoCard from Secure Logistics, unnecessary waiting times for drivers are in the past! This innovative access pass makes the job of a driver even simpler, faster, and safer. With the CargoCard, you get quick and hassle-free access to various locations, whether you're entering a terminal or working within the chemical industry. No more long waiting times: the CargoCard offers an efficient and reliable access solution that saves you time and streamlines your work.

With advanced biometric technologies as facial recognition, access to locations is 90% faster compared to traditional methods. This means less delay and higher productivity. In addition, the CargoCard ensures the highest security standards, providing optimal protection for both visitors and the site.

The CargoCard also offers automatic verification of essential certificates, such as those required for the transport of hazardous materials (ADR certificates) and safety instructions. This means you can always be sure that you comply with the applicable laws and regulations, without any additional administrative steps.

Design CargoCard from 2025

Advantages of the CargoCard:

- **Fast access:** Up to 90% faster access thanks to the CargoCard in combination with facial recognition.
- **Safe access:** Only authorized persons are granted access.
- **Compliance and risk management:** Minimization of risks and guarantee of compliance with security standards through automated certificate validation.

2. Frequently Asked Questions about the CargoCard and facial recognition

Drivers gain access to the terminals of Hutchison Ports ECT Rotterdam (ECT Delta terminal and ECT Euromax terminal) using the CargoCard. After reading the card, the identity of the card user is verified by means of facial recognition (*Face Recognition On Chip*). Opening the barriers is then contactless, even faster and safer. ECT will start rolling out facial recognition from the end of May/beginning of June. Eventually, this technology will replace fingervein.

1. How does the CargoCard work?

The CargoCard is your personal key to convenience. With the CargoCard, drivers get fast, easy, and reliable access to various locations affiliated with Secure Logistics, including the terminals of ECT. Click [here](#) for all CargoCard acceptance points.

2. How long is a CargoCard valid?

The CargoCard is valid for 3 years. You can find the expiration date on the CargoCard.

3. Why is ECT going to use facial recognition at the gate?

With facial recognition, access to the terminals of ECT is contactless, faster and safer. This ensures an efficient and effective access process with maximum user convenience.

4. Will facial recognition be used at all ECT locations?

ECT will start rolling out facial recognition from the end of May/beginning of June at the ECT Euromax terminal. . However the ECT Delta terminal will follow.

5. How does facial recognition work at the gate?

1. The registered facial recognition information is stored on the personal CargoCard that the driver carries. The CargoCard contains a chip that stores this data securely.
2. There is a card reader and facial recognition camera at the gate. When the driver wants to gain access, the driver places the CargoCard in the card reader.
3. After the CargoCard has been read, the driver is asked to look into the camera.
4. The camera compares the face with the facial recognition information stored on the CargoCard.
5. Does the facial scan match the data on the CargoCard? Then the data from the CargoCard is being sent to the access control system. Finally, the barrier goes up!

6. How is facial recognition added to the CargoCard?

In order to gain access to a location with facial recognition, it is necessary to have facial recognition added to the CargoCard. This can be done at one of the activation locations with facial recognition, including the Secure Logistics service point (*Hormuzstraat 50, 3199 KW Rotterdam*). Click [here](#) for all activation points.

The employees on location will support the drivers in order to add facial recognition to their active CargoCard. When presenting the CargoCard, the card user is authenticated using fingervein. After the finger scan, the registration of facial recognition starts. At the activation point, there is a camera that takes a photo of the face and then sends it to the chip of the card via a personal computer. As soon as the photo is on the card, the photo is deleted from the memory of the personal computer. The photo is therefore not being saved, but is encrypted on the chip of the CargoCard.

Card users with a medical indication

Visitors with a CargoCard and a medical indication must reactivate the card to add facial recognition. To do this, they must have proof of identity with them. **Please note:** this must be the same proof of identity as the one with which the CargoCard was applied for.

Visitors with a new CargoCard

Visitors with a new CargoCard who still need to activate the card, can go to one of the activation locations with facial recognition, including the Secure Logistics service point. The usual procedure for activating the card is followed on location. During this procedure, facial recognition will also be added to the CargoCard, subject to the required approvals.

7. Where can facial recognition be added to the CargoCard?

It is possible to have facial recognition added to the CargoCard at one of the activation locations with facial recognition, including the Secure Logistics service point (*Hormuzstraat 50, 3199 KW Rotterdam*). Click [here](#) for all activation points.

8. Which documents does the driver need to bring for adding facial recognition?

In order to have facial recognition added to the CargoCard, the driver must be in possession of an active CargoCard. Take the CargoCard to the activation point to have facial recognition added. An identity document is not required to add facial recognition. However, we advise the driver to always carry a valid proof of identity with them.

9. Is facial recognition by Secure Logistics completely privacy-proof?

Yes, the use of facial recognition is completely privacy-proof. No photos are stored in a central database, but only a biometric template is stored on the chip of a CargoCard. The biometric authentication at a column is based on a one-on-one comparison of the image from the

camera and the biometric template on the CargoCard. This means that the card user always retains control over the sharing of this data and decides when the face is used for verification.

10. Is the (personal) data on the card secured?

Yes, this data is strictly secured. The data is only accessible to security staff who have access to the XS-ID Online platform of Secure Logistics. The systems meet the strict information security requirements, whereby the data on the CargoCard is stored encrypted. The chip on the card can only be read with a special key that is exclusively in the possession of the supplier Secure Logistics. In this process, the card user is only authenticated by means of biometrics during the (access) process and not re-identified.

11. Which privacy rules apply?

For information about privacy, we refer you to the [privacy statement of Secure Logistics](#).

The data of the CargoCard can only be changed by Secure Logistics. This can be done at the address below:

Secure Logistics B.V.

Maasvlakte Plaza
Hormuzstraat 50
3199 KW Rotterdam
Port number 8780

12. What happens to the data once the CargoCard is no longer in use?

After the statutory retention period of two years, it is automatically anonymised. The photo itself is only encrypted on the CargoCard. When the CargoCard is returned or destroyed, this data is no longer available.

13. What should the driver do if the CargoCard is lost?

The driver must contact the employer. The employer can block the CargoCard via the XS-ID Online customer portal 24/7, so that it can no longer be used.
